

Senior Frontend Engineer with 7+ years of experience architecting high-performance web applications and leading technical direction. Specialized in design systems and scalable frontend architecture: component libraries adopted across four countries, a 70+ component design system with automated codemod migrations, and micro-frontend platforms built for independent team delivery. Experienced in large-scale Next.js App Router migrations, real-time interfaces driven by server-sent events, and AI product engineering across LLM, speech and media generation pipelines. Committed to mentoring, defining best practices, and building systems that balance developer experience with optimal user performance.

SKILLS

Architecture & Design	Frontend Architecture Design, Micro-frontends, Multi-Zones, Component System Design, Design Patterns, Architecture Decision Records (ADRs)
Technical Leadership	Code Reviews, Mentoring, Technical Documentation, Performance Optimization Strategies, Technical Standards, Cross-team Collaboration
Core Technologies	TypeScript, JavaScript, HTML5, CSS3, SCSS, Python
Frontend Frameworks	React, Next.js (App Router), Angular, Astro, Stencil
State Management	Zustand, Redux, NgRx, RxJS, useSyncExternalStore, Server-Sent Events
Performance Engineering	Core Web Vitals, Lazy Loading, Code Splitting, Bundle Optimization, Rendering Strategies, SSR/SSG/ISR, Caching
Component Systems	Design Systems, Component Libraries, Radix UI, CVA, Design Tokens, Storybook, Tailwind CSS, Web Components
AI Engineering	LLM Integration, Model Context Protocol (MCP), Prompt Engineering, Streaming Interfaces, Job Queues, TTS and Media Pipelines
Testing & DevOps	Vitest, Jest, Testing Library, Playwright, Cypress, Chromatic, jscodeshift, CI/CD Pipelines, Nx, Turborepo

PROFESSIONAL EXPERIENCE

Current January 2026	Senior Frontend Engineer, COMPASS, Argentina - Frontend engineer on the Transaction Management team at the largest residential real estate brokerage in the U.S. (NYSE: COMP), on a platform serving a network of 300,000+ agents. - Raised test coverage across the application with unit and end-to-end suites. - Migrated React components from JavaScript to TypeScript as part of an ongoing modernisation of a mature codebase. - Delivered features spanning several pre-established internal libraries, coordinating changes across them so product work lands without diverging from the shared platform. - Shipped team-wide document template sharing behind a feature flag: a CRUD flow with dynamically loaded modals, built inside an inherited shell-and-iframe architecture and extended without distorting it. ReactTypeScriptUnit & E2E TestingLegacy MigrationFeature FlagsInternal LibrariesPRD & Tech Specs
December 2025 November 2023	Senior Frontend Engineer, DD360, Mexico - Architected a design system of 70+ components on Radix UI and CVA, adopted by 5+ applications; raised documented components from 20% to 100% and test coverage from 40% to 90%+. - Built jscodeshift AST codemods with dry-run previews and impact reports that cut breaking-change migrations from 2–3 days to 5–10 minutes; the v2.0.0 migration applied 234 transformations across 450 files in 8 seconds. - Designed a modular visual website builder with component tree serialization, a JSON-based rendering engine and an extensible component registry, reducing site creation from 2–3 weeks to 20–30 minutes and lifting PageSpeed from 60–70 to 95+. - Led a platform of 5 independent micro-frontends and 15+ shared packages on Turborepo, cutting bundle size 60% through dynamic imports while holding FCP under 1.5s and 99.9% uptime. - Reduced developer onboarding from 2–3 weeks to 2–3 days through Storybook documentation, Chromatic visual regression testing and architecture decision records. October 2023
December 2018

Senior Frontend Engineer, KAVAK, Mexico

- Built and maintained the component libraries powering every Kavak product: 120+ components reaching 100% adoption across 4 countries and millions of users, cutting feature development time by 40%.
- Chose Stencil with scoped styles over Shadow DOM so components stayed serializable and SSR/hydration-safe across both Angular Universal and Next.js consumers.
- Co-created Androssi, a mixin-based SCSS framework (45+ mixins) that reduced CSS duplication by 60% with zero breaking changes after v1.0, supporting per-country theming and RTL via SCSS maps.
- Established the Core Web Vitals development guidelines adopted across all platforms, and transformed system architecture through design patterns that improved maintainability and reduced defects.
- Mentored junior and mid-level developers through pair programming, technical presentations, documentation and code reviews.

EDUCATION

2019 Simón Bolívar University - Venezuela. B.S in Computer Science.

PROJECTS

STORY TELLER VISUALIZER

2024 - PRESENT

 [Isekai Worlds on YouTube](#)

Designed and built an end-to-end platform that turns web novels into published video episodes. It covers the whole chain — adapting the source material, producing narration and visuals, assembling the episode, then scheduling and distributing it across several platforms — as one automated pipeline, with a review interface where a person can step in and correct anything before it ships. Work spans the full stack: product, generation pipeline, render services, review interface, publishing tooling and the infrastructure it runs on.

Next.js React TypeScript Rust Prisma LLM & TTS integration Job Queues Video Rendering

PERSONAL FINANCE WALLET

2025

 [finance-wallet](#)

Built a personal finance management application with multi-currency support, transaction tracking, investment monitoring, shared expenses and financial forecasting. Implemented authentication and row-level security on Supabase Postgres, an internationalized interface, and a 51-file internal design system on Radix primitives, alongside data visualization for spending patterns and projections.

Next.js 15 React 19 TypeScript Zustand Supabase Radix UI Tailwind CSS next-intl Zod Vitest

REAL-TIME MULTIPLAYER BOGGLE

2025

 [boggle](#)

Developed a real-time multiplayer word game with Spanish dictionary validation, authentic dice-board generation and a persistent scoreboard. Built two independent game engines behind a shared interface, with state synchronized across clients over WebSockets and covered by 32 test files plus a Playwright end-to-end suite.

Next.js 15 React 19 TypeScript Socket.IO Zustand Tailwind CSS 4 Vitest Playwright

YU-GI-OH! DECK BUILDER

2022 - 2025

 [Live demo](#)

Built an interactive deck-building application demonstrating reactive programming patterns and Angular architecture practices: drag-and-drop deck editing across main and extra decks, a filterable card catalog backed by a public card API, banlist format switching, and deck import/export. Diagnosed and fixed a page-level layout defect where hidden tooltip pseudo-elements contributed to the scroll area, forcing both horizontal and vertical overflow.

LOCAL STORAGE TRANSFER EXTENSION

2023

 [ce-copy-local-storage](#)

Engineered a developer-focused Chrome extension that synchronizes local storage values and cookies between browser tabs. Implemented tab selection, data synchronization mechanisms, and persistent URL storage. This tool significantly improves workflow efficiency for web developers by ensuring consistent session states during development and testing.
